Job Title:
SAS Programmer Non-Clinical

Job Description:

Our Client in downtown San Francisco has a group which has created a tool within SAS to help the business in some of its most critical initiatives. This tool will help them to make sense of large amounts of data. They are migrating an old legacy system to SAS.

Based on what we have learned about this role, He/She will need to be able to:

- Understand previously written SAS code – strong experience with macros, etc.
- Have a working knowledge of statistics; in particular means, SDs, the concept of clustering.
- Ideally has worked in a development environment, where he/she had to write new SAS code or modify existing SAS code (as opposed to merely running reports).
- Strong communication skills; ability to deal regularly with the business partners.
- Detail oriented; ability to debug code, troubleshoot and fix problems.
- Can deal with ambiguity involved in a “start-up” type environment with potentially changing roles; willing to grow and adapt to the team’s needs.

At a minimum, this person should have 3 years of solid SAS experience. This experience should be in a business environment (vs. academics), and ideally in a development capacity.
