

SAS Programmer contract - Edmonton, Alberta, Canada

We are seeking a SAS programmer for a 1 year contract for edmonton, alberta, Canada, the details of which are as follows:

Reporting directly to the Team Leader and indirectly to the Director of Systems Development and Support, the Systems Analyst will provide support to the application. The prospective candidate requires a broad knowledge of Client/Server technologies, proven SAS and SQL programming experience, experience in development and maintenance of large applications, strong communication and interpersonal skills, and a proven ability to function within a team.

Responsibilities may include:

- Performing detailed analysis and design of proposed application changes;
- Performing program modifications and enhancements with minimal direction;
- Providing impact analysis of proposed business changes on the application, in terms of development effort and system performance;
- Providing resolution to problems arising in the production version of the application;
- Leading a subset of the larger team in a particular short-term enhancement effort;
- Developing programs to extract or convert data for use elsewhere;
- Performing data analysis to answer client questions;
- Adhering to quality assurance guidelines and maintain quality assurance on all deliverables;
- Liaising with acceptance testing, client community, and operations areas;
- Providing on-call support on an as-needed basis;
- Status reporting to team leader as required;
- Developing and maintaining application documentation; and
- Using modeling techniques for data, process and business design.

Mandatory Requirements

- (a) Three years experience as an analyst in supporting an existing, mission critical application, within the past five (5) years.
- (b) 3 years experience in data extraction, analysis, and presentation of results, including interaction with the users regarding their requirements, within the past five (5) years.
- (c) 3 years experience in SAS programming within the past five (5) years.
- (d) one year experience in using Infomaker (version 5.0 or greater) within the past (3) years.
- (e) 3 years experience working with a large Sybase database, in particular constructing complex SQL and stored procedures, within the past five (5) years. Similar experience with Oracle will be considered.
