

# Women's Health Research at Yale

factoring in gender

## **Biostatistician/Women's Health Research - Yale University, New Haven, CT**

The Women's Health Research program at the Yale University School of Medicine seeks a biostatistician for an Associate Research Scientist level. Requirements include holding a Ph.D. or equivalent degree in statistics or related field, and having some experience conducting data analysis and providing statistical consultation within the context of medical research. Duties will include acting as the primary data analyst and statistical consultant for research projects associated with a newly funded center on sex, stress and cocaine addiction, as well as for other research projects of interest to women's health.

Interested persons should send a letter of application, a CV, and a list of at least three references.
